

Bradmark Professional Services Surveillance QuickStart

Consulting Datasheet

Why Consider A Services Program

Many customers requested that our technical experts come on-site to ensure they are receiving the full value of their investment in a timely manner.

Services ensure proper adoption of the technology based on best practices and are suitable for new as well as established implementations.

As development of product features increase; not all DBAs have the time to informally familiarize themselves or have the latest training to recognize areas to which the new features are best suited.

Data repository usage has expanded past the reporting server days, and some of the more complex routing mechanisms require some expertise to get it performing as expected.

Bradmark customers can achieve the best results possible from their Surveillance investment with the help of our Professional Services organization. As specialists in IT infrastructure management solutions, we offer consulting services delivered by a worldwide team of experts to get your environment up and running quickly and working more efficiently — whether your business is conducted inside the office or on the road.

Bradmark's Professional Services enables clients to select components, which are most valuable to them from a standard list and configure a prepackaged engagement consisting of training, validation, migration, implementation, knowledge transfer and project planning services offered by the Professional Services staff of Bradmark Technologies or Bradmark's certified third party service agents.

Our **QuickStart** program begins with product-related consulting engagements to assist you with the installation and configuration of Surveillance products. This program is an interactive engagement with a Bradmark expert geared toward reducing common risks encountered during the deployment of your project. Typically three days long, this engagement requires only a modest investment to get you started immediately and up to speed quickly.

Primary Objectives

- Improve the efficiency and effectiveness of database tools through implementation of best practices to be used in the client's environment while using Surveillance
- Improve or validate the stability of the database environment in which Surveillance has been deployed
- To introduce and assess the client's ability to use the features available in the latest releases of Surveillance
- Align Surveillance with the current operating environment

Surveillance Quick Start Service Engagement

Description	New Installation: Scoping, implementing, training, knowledge transfer for new installation of Surveillance
